Encantada La Historia De Gisellevdripspanish

YouTube · The Mail · Google · Yahoo Google · Facebook · Pinterest · RSS Mirror:.chunzuo.com Encantada La Historia De Giselle. This is a free English Subtitle. The subtitle of the movie is not available. Chapter Description. Years later, as Giselle has married and settled down, she finds herself. Encantada La Historia De Giselle [LATIN SPANISH] Full HD 720p 240fps English Subtitles and Ogg audio.The present invention relates generally to apparatus and techniques for

measuring the width of a stripe such as a pen body from which ink is ejected. One technique for measuring the width of a stripe such as a pen body of an ink-jet pen is disclosed in the U.S. patent application Ser. No. 07/688,981 filed Mar. 31, 1991 and entitled "Method and Apparatus for Measuring the Width of a Stripe" having a common assignee with the present invention. According to this prior art technique, two sensors are arranged on the back side of the stripe, so that the sensors are located outside the pen body. The sensors are provided with light receiving parts and have optical elements such as light receiving elements and light transmitting elements, which are used to receive the light coming from the front side of the stripe. Then, the width of the stripe is determined in dependence upon the outputs of the sensors. The above U.S. patent application contemplates the use of two sensors for the measurement of the stripe width. One of the sensors is provided with a light receiving element and a light transmitting element, and the other is provided with the same elements but with the light transmitting element. In the system of the above U.S. patent application, it is assumed that the light receiving elements detect the light transmitted from the light transmitting element, and the light receiving element detects the light reflected from the back side of the stripe. The width of the stripe is determined in dependence upon the two outputs of the light receiving elements. Since the two outputs are in agreement with each other, the width of the stripe is determined by using the output from the light receiving element which

has the better sensitivity. In the prior art method and apparatus, a light source and an optical system are required for each sensor to determine the width of the stripe. This results in complicated structure. Another technique for measuring the width of a stripe is disclosed in the Japanese patent laid-open publication No. 59 79a2804d6b
