- The worlds most powerful filtering library for SharePoint. - Easy to use & customize. - Supports filter types: - Page Request (URL query string) filters, List Lookup Filters, SQL Data Filters, BDC Business Data Filters, User Filters, Date Filters, Page Column Filters, Choice Filters, Text Filters. - Easy to configure - With well documented API. - Save your SharePoint Admin's valuable time and energies. - 10x Performance improvements - SQL Server compatible. - 100% Control code free. Why it's better than the competitors? FilterZen: 1) Supports filter types: a) Page Request (URL query string) filters, List Lookup Filters, SQL Data Filters, BDC Business Data Filters, User Filters, Date Filters, Page Column Filters, Choice Filters, Text Filters. b) Easy to use and customize: - Auto-Discover-Identify the filter in one-click, based on the link in the page header or URL. - Easy to

change filter type or customize the existing. - Easily add, delete, change the filters and their position. - No more hard code; - No more Html in your source code. - Set your own filters value, from client side using JavaScript or server side using ASP.NET. 2) Save your SharePoint Admin's time and efforts. - Ready to use out-of-the-box with no coding. - Has very powerful APIs, so you can control the filtering easily. - 10x performance improvements for massive data sets (MySQL) - Works on SharePoint 2007 and WSS 3.0 3) 100% control code free! - No.net programming needed - No SQL Server needed - SQL Server compatible - Works for any version of SharePoint - Well documented API Why it's better than the competitors? The competition: a) No support filters: 1) Auto Filter 2) Page Request (URL query string) filters, List Lookup Filters, SQL Data Filters, BDC Business Data Filters, User Filters, Date Filters, Page Column Filters, Choice Filters, Text Filters. b) No API support: 1) No control/programmability. 2) No auto-detect filters. 3) No well documented

#### **FilterZen X64**

An SSJS macro for MS Word which contains the following 1. the entry of a searchstring to search for in a particular MS Word document. The macro can search for a string in the entire document, in a table, column, cell, paragraph, comment, drawing, image, paragraph, section, page and other parts of the document. You can use one of the formulas

for conditional search: \* A condition can be one of these items: + - > = = or else. 2. the macro can return the location of the found string in MS Word. 3. The macro can perform a search operation on multiple strings at a time. The macro will automatically clear the searchstring after each find operation. 4. The macro can create a hyperlink to open the search results. The hyperlink can be set to open the results in MS Word or another application. The macro can use either the file name or the path to the results as the link destination. 5. The macro can show a dialog box to confirm that the user wants to use the searchresults. The macro uses an array object to store the search results. KEYMACRO Usage: The macro can be used on Microsoft Word documents. Please try the macro and let us know if it works well for you. KEYMACRO Notes: \* The macro can search for a word or a sequence of words. \* If the macro finds the right location of the search string, the macro will return the location of the first string in the array object. For example, if you want to search for "Microsoft Word" in a document, you can use the following macro. If you run this macro, the macro will search for "Microsoft Word" in the document and the results will be displayed in the console window. You can see that the results are: "3" : { "range" : { "start" : 10, "end" : 10, "length" : 4 }, "text" : "Microsoft" } "4" : { "range" : { "start" : 17, "end" : 23, "length" : 6 }, "text" : "Word" } "6" : { "range" : { "start" : 6, "end" : 6, "length" : 7 }, "text" : "cobweb" } "8" : { "range" : { "start" : 14, 2edc1e01e8

## FilterZen

FilterZen is the best web part for SharePoint yet. From one click to one click, FilterZen's easy-to-use web interface lets you create and deploy powerful views of your data with a single click. With complete programmability to customize your filtered views in the future, FilterZen is the fastest way to quickly and easily build and deploy views on any SharePoint data.

**Release Notes**

**Release Notes:** This is the latest version of the filter web part. This release adds:

- \* An updated FilterZen.css file to be compatible with the IE7 bug (1)
- \* Updates to the JavaScript portions of the filter web part

The version number in the file version history is incorrect - it should be 0.11.1 Only the major version (0.x) is increased for each version of this package.

**Affected Products** All SharePoint 2007 and higher versions

**Fixes** Version 0.11.1 (07/23/2009) Resolves issue where all links were displayed as plain text. Added a new JavaScript file to the package

**Version 0.11.0 (06/15/2009)** A new release of the filter web part that allows you to easily add a filter web part to your custom web parts page. You will be able to choose the type of filter (standard or relational) and the web part configuration for that filter type.

**Release Notes**

**Release Notes:** This is the latest version of the filter web part. This release adds:

- Fixes issues where auto refresh of the filter web part was not enabled and where individual filters were not working.

**Version 0.10.2 (05/12/2009)** Resolves issue where you could not disable the auto refresh. Updates the JavaScript file in the package

**Version 0.10.1 (05/11/2009)** Fixes a performance issue where your filter web part would not refresh until you

selected an item in the web part list view control. Updates the JavaScript file in the package Version 0.10.0 (05/09/2009) A new release of the filter web part that adds programmability to the filter web part. You will be able to define a custom class to use when defining your filters and also assign a web part configuration for your custom filter class. Release Notes
