Users can train a

Content-Aware Fill to learn a selection by performing any of the following actions: drag a selection to the canvas, drag the mouse in a circle, draw a selection on the canvas, and highlight an object. You can also train a Content-Aware Fill by using one of the following commands: Right-click, Edit > Settings > Content-Aware Fill > Training Mode, or select Content-Aware Fill > Training Mode. Once training of a selection is done, the Content-Aware Fill feature will automatically learn and apply the selected selection to other images of the same content.
