Having moved completely into the digital realm, my favorite photo editing program is Adobe Photoshop by far. The sharpening and smoothing has always been among the best, and that hasn't changed! I love the Basic selection functions, Moonstone atlases (highly recommended), and the ability to make quick fixes. The latest update of the program has been very nice too, especially the capability of choosing the size of your canvas of choice. When you have a huge image I wish I could just keep working in a single frame rather than having to scroll off the bottom of your screen. Overall, I am extremely happy with Photoshop CS6 and find it to be an extremely efficient and powerful tool for my business. Adobe Photoshop CC is currently in exclusive trial mode. We have decided to hold off on installing it for a few months and will resume the review process in the spring of 2016. Thank you for your patience. Outro - "I´m glad I´m not the only one"

Although this whole review is done on the iPad, i.e. photo more than video, this is just me noticing that Adobe may still be feeling the need of making video editing more accessible to creative professionals. Meh, I use 5.5 now and it's ok, it's not bad at all. I'd have been much happier if there were more control over the use of these tools in a project. I start a project and then they're all hidden away. There's no parameter for controlling action by action, whether they should happen locally or on the server, how I want to use custom tools, etc. The only thing I can do is to turn my auto-save feature off.
