Lightscreen Crack + Download

If you need to capture and upload multiple screenshots on a daily basis, then this is definitely the app for you. It is a straightforward, fully-featured screen capture utility that offers a lot of functionalities. The program's interface is simple and intuitive and makes it easy to take screen shots from the desktop, specific windows or a selected area. It even includes a handy window picker that allows you to quickly identify and select the window you want to capture. Once you have chosen the area, you can click the capture button and Lightscreen will instantly capture what you want and save it to one of several image formats (JPG, BMP or PNG) and keep a list of the captured images in your Windows desktop. Furthermore, you can decide which format to use and which folder to save the screenshots in via the application's configuration options. These can also be customized from user-defined hotkeys. In order to upload your screen shots, you can rely on the application's built-in script that uploads them automatically to Imgur and other hosting websites. For easier access, the configuration options also include the ability to directly upload images to an existing Imgur album. To sum up, Lightscreen is a fast, fully-configurable and versatile screen capture utility that offers a lot of functionalities. You can also have the program display a preview of the image that has just been captured, so you can make sure it looks good before you upload it. Most Popular Apps Today's "The Best Apps" section is a compilation of the most useful, recommended apps for Windows 10 that we have compiled over the last week. Lightscreen Crack+

What's New In Lightscreen?

Capture the currently displayed desktop, an application window or a selected area of the screen. It allows you to save each image to the file system or to Imgur, and it can upload multiple screenshots automatically. It is also possible to select the folder where the images will be saved, and it will offer you the ability to name them according to your own preferences. It supports automatic preview, and it can be launched from the menu or via a user-defined hotkey. It is a light application that should not interfere with your system in any way. Includes a portable version. Configuration options: You can customize how many images are captured when you press the "Capture" button or select it with the "Window" tool, and you can specify the path to the folder where the images will be saved. It also has a file selection tool, and you can add your Imgur account credentials to upload your screenshots to this website automatically. However, it has a small footprint, and it is installed in the system tray when not in use. Portable program or local program: It can be installed in a portable program that will not save any data on your hard drive or add any registry entries. It is also possible to run it on a portable storage device. How to download and install Lightscreen: 1. Launch your web browser. 2. Open the download page for Lightscreen. 3. Click on the "Download" button to start the download. 4. Once the download is finished, run the Lightscreen Setup file. 5. Follow the prompts and click on the "Next" button to install the program. 6. Allow the program to be installed, and it will automatically start once the installation process is complete. Screenshots provided by Lightscreen: Description: Capture the currently displayed desktop, an application window or a selected area of the screen. It allows you to save each image to the file system or to Imgur, and it can upload multiple screenshots automatically. It is also possible to select the folder where the images will be saved, and it will offer you the ability to name them according to your own preferences.
