Adobe has improved the program's overall performance with faster file-loading. Previous versions of Photoshop used disk space like an idling tractor trailer on a California freeway with all lanes of traffic backed up. Photoshop CS6 is significantly faster in loading resulting in less time to do tasks. Users can add and remove memory at any time though; using a folder of memory-heavy files to reduce the size of the system's memory cache can help performance. A lot of low-level improvements in 21 but most people will only notice the changes via the cloud. Instead, you should be looking at the final release as it is a very substantial update, with many improvements. Some of the big ones are:

- Given the potential dangers of data breaches, this is crucial.
- Hard revisions now work
- Addition of the **Find & Resolve** tool. This was a paid-for feature in Elements 2018, and I can see how frustratingly slow it could be.
- P.S. That P.S. at the bottom if you don't know what it means!
- A **sharpen** value. In my opinion, there is a best value. The default is very close to it.
- Added several filters
