Action, shoots? I don't know, I don't do photography, but at some point I did. And then I remember that I don't know even a little bit about it. I can't and don't want to believe that most (or any) of you have any "real" or detailed knowledge of what you do, but just accept it. Think about why you do what you do, and what impact you want to have on this world.

If you have a smartphone, one of the best apps to research is Google. Not only does the app search your device for the specific words you enter, but it will show you any results for those words that it finds. Go down the rabbit hole a bit to see if you can find anything that interests you and next time when you go to check into a flight, you may have a better understanding of the options you have in getting to where you want to go.

The first time we lighten the black area in the image, it gets removed. All the black area is gone. Both the original layer and the blended layer exist side-by-side making it easy to experiment on layers or pictures with different blending options. Try experimenting on the bottom layer to see what happens.

Excellent! 15% of the image is unblended! Play with the blurred layer or the layer below that until you get it just the way you want it. The other option is to use auto settings which is where the camera will use the scene setting by default. If you want to have some control over this, there's a slider to manipulate with its lighten or darken setting. Perhaps you want a small portion of the black removed, so set the slider to 50% or maybe you want the entire black area removed, so set the slider to 100%.

Whether you're designing for print, web, mobile, or any other platform, Interactive Grid Settings let you choose up to 12 *arbitrary* guides for web and print, with a number for each different setup you choose in the grid. With Interactive Filters, you don't have to worry about the exact placement of your layer anymore. Just drop your photo on top of the stylized layer, and use the exact positioning settings you want for your filter effect. Create more border lines for your border using the *Custom Shape* tools. Use the Polygon tools for creating border shapes, and the Freeform tools for making freeform shapes. Or customize a freeform shape in the Eraser or Clone tools to the precision of your choice. Levels are one of the most important features in Adobe Photoshop. They're an image adjustment that's used to keep the best parts of your image while removing the parts that you want to discard. Levels let you control your image's tone, color, and exposure. Sketch plugins in Photoshop allow you to draw on any object with the digital pen, erasing your work before your eyes, and let you convert your sketches into paths that you can use in Photoshop's 3D tools. Easily make your layers transparent by they using the Blend Modes. Blend Modes let you blend two layers together in a specific color, make one layer interactive and transparent, or mix colors together and use them as the opacity of the new color. In order to create your best-looking images, you need to produce clear, accurate logos. Traditionally, this meant using a solid-colored background and heavily modifying a blank canvas layer. With the Adobe Illustrator 400 features, you can now use Illustrator to make cartoonlike symbols, then copy and paste them into Photoshop to add necessary text, shapes and other design elements. The new toolset also includes a library of 200+ typographic and color inspiration symbols with improved shapes, ease of use, and the familiarity that comes from looking at symbols in other fonts.
