Release Notes for Lightroom 5, published on the Adobe website, state, "Lightroom continues to do what it does best—help you make your images look their very best—with a streamlined interface and deep, intuitive capabilities." Lightroom 5 offers simplified workflow and organization, a mobile interface, speedier performance, support for Office 365, and access to global Creative Cloud libraries. Does it have a good new element? Probably, yes. Will all its long-time users be eager to pay the price for a fast experience pushing them away from the hang-ups, bugs and inconveniences of Classic and the Classic workflow? That's something that only time will tell. Global performance improvements and multi-core support were also highlighted as being good things for users with Solid State Drives (SSDs) preparing for the Photographers Upgrade to Speed tier that hit the scene on October 14th, 2016, and the new Blackmagic Direct Cinema "back-to-film" filter introduced. If you have Blackmagic Digital film cameras available in your system, an update is certainly in order. With Lightroom 5, the transition from Classic appears to be expertly executed. It is a welcome change that Apple users, many of whom were waiting for the day they could discontinue Lightroom Classic, could turn to for adventures in the new Lightroom. Adobe quotes the company's chief creative technology officer, David Horne, noting, "Lightroom is light, agile, and very easy to use. Lightroom is the modern, intuitive way to work in Photoshop on the desktop, and we couldn't be happier with the overall experience." That's something that one reviewer might proclaim, while some might say that Lightroom remains a camera RAW plugin in a suit. Long may it run.
