The new Retouch tool creates a finished result that is pretty close to a photo's original. It is, however, a bit like using a drunk to do brush work; it's very quiet, but the results are less than accurate. The tool automatically chooses the best settings to quickly fix flaws in a photograph. Recent versions of the Photoshop Editor have been a mixed bag overall, though. Version 15.1 just ended my six-month run here. The Editor's performance continues to degrade exponentially while you work. Even at version 15, I waited 20 minutes for the InDesign components of an InDesign multi-file document to load, and that's when the file was a document view, not a layout. If he could only take a few shots with a kit lens, he could use a basic point-and-shoot. If he had the time for many shots, he could enjoy the power of DSLR and the workflow of a pro photographer. So, he could use a digital camera with a professional lens. Instead, he uses a phone. Today, most of us use an iPhone. The iPhone 11 Pro Max is a smartphone fit for professionals, designed for photographers, or people who take a lot of photos. **How do I use actions in Photoshop?**
