Now here's something that I've been wanting for some time: the ability to show the current composition with the brush tool directly in the tools panel. Unfortunately, you have to drop the tool to get to the canvas and there's no other place to activate the brush. This seems like a no-brainer, but until it's implemented, it's just an extra step that I have to make each time I activate my brush. It would also be nice if the toolbar would immediately appear whenever you drop the brush, instead of having to click the little plus sign to position the brush cursor. It would be also nice if you could actually select tool presets that you've placed in the toolbar. Instead of having to select a brush and pressing delete to remove it, you should be able to click the brush icon and bring up the tool preset. This would speed things up when I find a tool preset that I think will be useful (a solid brush is often one of the first tools I reach for when I'm trying to do something in PS). This is where the results I've seen begin to come to a close. I tend to push the occasional mouse button when I'm working in Photoshop, but Adobe used to advertise that their brushes were a lot more pleasant on the mouse. This is no longer the case. While the brushes are definitely very smooth and the accuracy is excellent, they're no more pleasant to work with than the free brushes found elsewhere like GIMP and photoshop-strokes.com. I've done a fair amount of tile use in Photoshop CS6, and I've also worked with tiles in other rendering programs. I find the process of using the tile tool in Photoshop is significantly more complex than in other programs. You can't just drag a rectangular box around the area you want to create, it requires wrapping around, snapping, a lot of cleaning up, and sometimes even manually correcting to the grid.

Stamp is a new feature for image editing that automatically places common objects in your images. Instead of having to pick up stamps from a library and then painstakingly paste them into your images, Stamp will automatically find photos in your library and add them to images at points of interest. Using the grid pattern included in Stamp, you can quickly scan through images in your library, assemble them into a collage, and remove blurs, unwanted objects, and color casts. Sketch and Draw is a tool bundled with Stamp that will help you quickly draw objects directly on your images. Subsurface Scattering is a new feature for importing, editing and rendering Surface Scattering images that enables creators to easily come up with highly photorealistic or stylized images. Subsurface Scattering automatically creates more realistic renderings of your images by

simulating the drying effects on water surfaces. Designers can make textures glow, twist, blow and expand to reflect the sun and other realistic lighting effects — right in their image. Text in your document can now change instantly to match the updated appearance of other elements. Whether in Sketch or Draw, the compass is a new tool for defining the orientation of the object. Adobe Sensei Neural Networks offer powerful search and filters based on state-of-the-art deep learning technology. Photoshop, Premiere Pro, After Effects, Lightroom and InDesign can now all benefit from the power of Deep Learning, powered by Adobe Sensei AI. Photoshop continues to be the pillar of the suite of Deep Learning tools powered by Adobe Sensei AI. To get the best experience from these tools, there are two ways to configure Deep Learning. The first is by viewing a scene and choosing to apply a Lens Correction filter, a Style filter or a filter added to a layer. The second way of configuring Deep Learning is by using a Foundry tool called Force Input. Force Input makes it easier to add a filter by letting you quickly get to Lens and Style adjustment tools.
