This is another area which has been revamped and truly revolutionized in Lightroom 5. It is the main reason to upgrade. The former Photoshop Mobile app was a Passport-like app using which you could see many of your images in your browser without having to log in. It was a two-part process: one click "open", which displayed the browser and toggled between multiple thumbnails, and a second click to switch to the/a selected thumbnail. With 5, you no longer need even one click; press the touchscreen and it just immediately switches to the thumbnail you intend to edit. This is a huge improvement and a shake up, in my opinion. It is similar to what has been going on in photo editing programs over the past several years. Photoshop in particular has made good strides toward a program that behaves more like the various desktop programs where you can select and drag in just about any kind of image you want.

The Apple Pencil is a truly new sort of input device, without a device of its own. And it's asking for a lot. I have been using a left-handed Apple Pencil since the day it was released, because it's what I use to paint the illustrations and illustrations in this Review. But even it's harder than using a mouse to use the Apple Pencil with precision.

I've never been all that excited about the Apple Pencil. It seems the device has one useful function, and that's as a way to draw and draw scalable vector graphics, the only thing I use it for. The Apple Pencil is perfect for that, and it has actually improved my digital workflow in other ways, such as in Illustrator, by filling in the character guides on my vector illustration with simple strokes. Some brush work is interesting, but best of all, I can give out the Apple Pencil and it will work just fine on any Mac without even thinking about it. I take it everywhere, because I'm never without it. This will likely work for anyone with this kind of broad stroke transference.
