Meet Adobe Generator, Photoshop's new 1-click Merge and Split Modes. This new function allows you to more faster and easily choose which parts of an image will be split, or merged together, by simply dragging them on top of each other. You can choose whether to merge an image into itself, split objects into two parts, or use one in parts, or vice versa. The release of Photoshop CC 2020 also includes new features that have been requested by our customers. The enhancements include a new content-aware fill feature that helps bridge raw images or photos with areas that were blemished or taken out of focus to improve the image. By combining the time-honored "Remove Background" feature with the new "Content-Aware Fill" technology, it becomes possible to easily remove the background from almost any image – even a photo of a cityscape with a blur on it. Lastly, from the pocket to the cloud, in the web browser, Adobe PSD is also packed with new features such as Object Selection, a more powerful selection tool, smarter selection edges, new Select and Mask tools, a new Filter Gallery that leverages AI to recommend filters, and a host of improvements to text tools. Some of the enhancements will be available to the CS2 centered users later this year; for Photoshop CC 2020, these new features will be made available in a preview release, which will be available for download at https://www.photoshop.com. Finally, Adobe XD is also packed with powerful features. The new version of Flash Design System from Adobe makes it easier for designers to create responsive and mobile-first designs at a higher fidelity.
